

CONCRETE SUBSTITUTE LIDS

BCM GRC wrap over checkerplate lids can be used as a substitute lid for use on precast concrete channel. Being one quarter of the weight of its equivalent precast lid, for example C/1/10 GRC substitute lid is 10kg whereas C/1/10 precast is 42kg, the BCM GRC lid is easier and quick to get to site because more lids fit to a pallet and more pallets can be put on a train.

The BCM GRC lid is virtually unbreakable so you do not end up replacing broken lids time and again.

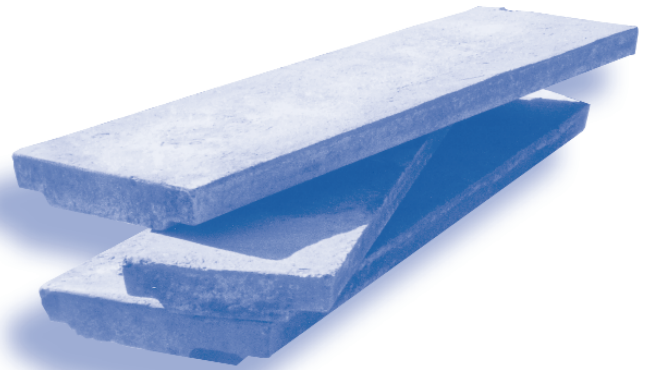

With permission of Network Rail & Carillion Rail.

BCM GRC substitute lids have been used successfully on the West Coast Route modernisation and have shown a cost saving for Network Rail.

CONCRETE REPLACEMENT LIDS

The ideal way to solve Network Rail's biggest ongoing maintenance problem of broken and damaged concrete lids. BCM concrete replacement lids are an exact copy of the concrete equivalent but are lighter and unbreakable. Available in all concrete sizes in one metre lengths.

PRODUCT CODES

BCM Part No.	Rail Industry Cat. No	Concrete Reference	Weight kg
BCM CR/12/01	4/090880	C/1/6	8
BCM CR/12/02	4/090881	C/1/7	10
